

April UPDATE

Hi ,
Customs isn't standing still and neither should you and your team.
Across the industry, the **pace of change is picking up**. The real challenge isn't just keeping up, but understanding what's worth your attention.

That's why in this April edition, we're keeping it simple. You'll find **three ways** to stay close to what matters: one **webinar**, one **event** and one **whitepaper**.

Shaping the future of Customs automation

The future of customs automation isn't one-size-fits-all. The conversation is just getting started. On 28 April, we're bringing three bold opinions to the table:

- Customs AI agents: reality or a risk?
- How is AI already shaping the next-generation customs declarant?
- The competitive advantage is on the table. What does it take and how do you start?

In this session, Gregory Vandermissen (Product) and Matej Planinic (Customer) join a dynamic panel moderated by Jana De Borger. Together, they bring product and customer perspectives to challenge assumptions, share insights, and engage directly with you.

Secure your place today

We're happy to invite you to **Customaite Connect 2026**, our annual event where customs professionals, product experts, and industry leaders come together.

Here's what to expect:

- ✓ Connect with fellow customs professionals
- ✓ Discover the latest Customaite product updates
- ✓ Get a glimpse of what's next for the platform
- ✓ Hear insights from a guest industry speaker
- ✓ Wrap up with a networking afterparty

More information is coming soon, so make sure to secure your spot.

From fragmentation to control: A new operating model for customs data

Customs performance is increasingly shaped by how organisations manage their data.

As global trade becomes more complex, many companies still rely on fragmented systems with limited visibility, making it harder to stay compliant and in control.

Our latest whitepaper shows why this is not just a regulatory challenge, but a data one, and how leading organisations are moving towards integrated data models and embedded validation to build a stronger foundation for modern customs operations.

Download whitepaper: From fragmentation to control

If you'd like to learn more about any of the above, or see how Customaite could support your customs processes, **feel free to get in touch**.

Best regards,
The Customaite Team
